

Six Month Smiles

Need braces but hesitant to get traditional, unsightly metal ones? Six Month Smiles is a revolutionary orthodontic system that has taken the best aspects of braces and modified the treatment and the materials to give adults a common-sense, cosmetic solution that fits their lifestyles.

How does Six Month Smiles work?

They are a set of clear braces and wires that blend in well with your teeth so that they are virtually unnoticeable. They work together in order to straighten and align teeth for safe, comfortable and efficient tooth movement.

Will I have to wear a retainer?

Yes. You have an option of wearing a removable retainer or a bonded retainer that will be placed behind your teeth. A retainer is necessary in order to ensure that the teeth maintain their position.

Who can get a Six Month Smiles treatment?

Any person who is aged 15 years or older may undergo this treatment process. It is suitable for those with crooked or spaced teeth. Ask about a consultation with Dr. Seddon today.

It only takes 6 months?

The average treatment time is six months but it can range from four to nine months. In six short months, your life will definitely change!

The Six Month Smiles System

After the records appointment, the impressions of your teeth and a case submission script are sent to the Six Month Smiles Case Processing Facility. Once the case is received, a bracket specialist identifies the correct location for bracket placement on models of your teeth based on the desired result. Once all of the locations have been determined the bracket specialist carefully places all of the brackets so that the desired orthodontic result will be achieved. The specialist then fabricates custom bonding trays, making bonding the braces to your teeth remarkably easy, efficient and stress free. The bonding trays, appropriate tooth colored wires, ties, and other needed materials are packaged into the Six Month Smiles Patient Tray Kit. Once the Patient Tray Kit has been assembled, it is returned to Dr. Seddon's office ready to use.

When you come in for your braces on appointment, the Patient Tray Kit is retrieved and the process begins. After the braces on appointment, you are seen every 4 weeks, for a simple adjustment visit. Once the teeth are in the final position, the braces are easily removed and adequate retention is provided. You are able to enjoy a smile that looks great and no longer makes you feel self-conscious. The Six Month Smiles System is safe, straight-forward and patient focused.
